

Year five audio tour

This program is self-guided but must be booked prior to your visit.

Hand-held MP3 players (a class set is available for loan) give students independent tours through the gallery, focusing on the adaptations of animals to various habitats.

The tour links with the Australian Curriculum Science Understanding: living things have structural features and adaptations that help them survive in their environment

The tour also links with the cross-curriculum priority of Sustainability.

Students need to be in groups of three to five with each group being supervised by an adult.
